

INFORMATION SYSTEM

myGEM

Make your business **run**
like clockwork.

ADVANCED MANAGEMENT OF
IMPLEMENTATION PROCESSES, DEVELOPMENT AND PRODUCTION.

myGEM BENEFITS

Robust features provide time savings and high productivity.

Simple operation and easy adoption.

Own economic modules, can be connected simultaneously with another solution.

Special features tailor-made eg. production management and production planning.

Mini applications for tablets and web applications meet your exact requirements.

Own team for implementation, support and future development.

PRODUCT SHEETS

A detailed description of the modules is in the product sheets.

PRODUKTOVÝ LIST **myGEM**

ŘÍZENÍ VZTAHU SE ZÁKAZNÍKEM CRM
Customer Relationship Management

CRM shromažďuje prvotní a zároveň významné informace o budoucích zákaznících. Tato data pak slouží jako podklad pro další rozvoj vztahu se zákazníkem směřující k uzavření smlouvy a následné spolupráci (prodej, dodávky ...).

Zajišťuje tak správu a aktuální informace o potenciálních zákaznících – odběratelích i dodavatelích.

Shromažďuje potřebná data na jednom místě v informačním systému. Například, o jaké produkty by měl zákazník zájem, v jakém segmentu se pohybuje, kdy je vhodné zákazníka kontaktovat, atp. Ke každému zákazníkovi lze přiřadit veškerou potřebnou dokumentaci, tj. poplávky, e-maily, výkresy, nabídky atp. včetně kontaktů, adres a informací. Je možné poznačit, v jakém stádiu se tento vztah nachází (první kontaktování zákazníka, poplávko-nabídkové řízení, uzavření smlouvy, ...). Veškerá upozornění jsou zobrazována i v Kalendáři, který poskytuje rychlý přehled důležitých událostí a úkolů.

Tato databáze potenciálních partnerů zajišťuje možnost získání dalších obchodních příležitostí do budoucna. Nedílnou součástí modulu je i evidence a rozesílání kampaní (hromadné i jednotlivé).

CRM v systému myGEM

PRODUKTOVÝ LIST **myGEM**

PLÁNOVÁNÍ A ŘÍZENÍ VÝROBY RVP

Systém myGEM nabízí několik možností jak plánovat výrobu. Jedním ze základních plánování je plánování časové. Plánovat lze dopředu, ale i zpětně a to dle nastavených kapacit strojů, i s ohledem na materiálové zásoby.

Ocenitelnou výhodou je **generování kalendáře**, podkladu pro plánování (rok, měsíc), nejen pro celý podnik najednou, ale také pro jednotlivá střediska, pracoviště i stroj (tzn. každé středisko/pracoviště/stroj může mít svůj vlastní, odlišný kalendář). Jednotlivé zakázky lze libovolně přepínat dle aktuálních potřeb a priorit.

Další možností, jak plánovat, je **operativní plánování dle aktuálního stavu lidských kapacit**. Jeho hlavním cílem je možnost denního plánování jednotlivých zakázek po zadání nepřítomnosti pracovníků a jejich časových fondů. Systém tak automaticky přepíná vybrané zakázky dle skutečně disponibilních lidských kapacit.

Umožňuje tím **operativní plánování dle aktuálního stavu pracovníků**, včetně sledování kapacitní zátěže (denní, týdenní). Je-li používána i evidence docházky, lze kapacity automaticky nastavit (modul Evidence výroby).

Systém umožňuje i **dílenské plánování**, tzv. **detailní plán**. Slouží k ručnímu plánování jednotlivých zakázek na konkrétní dny. Tak má uživatel možnost si vybrat a zahrnout do denního plánu konkrétní automaticky naplánované zakázky, včetně přiřazení jednotlivých pracovníků k požadovaným zakázkám a operacím. Sám tak sestavuje detailní plán dle priorit a stavu pracovníků.

Další výhodou je tzv. **plánování na transportní dávky**, které umožňuje zakázku rozdělit na několik dávek, resp. každou operaci, dle stanoveného množství dávky v TPV. Tento princip umožňuje průběžnou výrobu, kdy po zpracování dávky jedné operace může být zahájena práce na další, aniž by bylo zpracováno celkové množství zakázky na předchozí operaci.

Veškeré zaplánované zakázky je možné pro lepší přehled zobrazit graficky, např. jako časový průběh zakázek či zobrazení kapacitních zátěží.

Pomocí jednoduché funkce a zobrazení lze odhalit i kritická místa výroby.

V rámci výroby lze provádět mezioperační a výstupní kontrolu, s možností evidence kontrolních parametrů. Monitorovaná data jsou pak vyhodnocena v modulu MES – Manufacturing Execution System (měření, sledování vybraných parametrů, neshody atp.), včetně kvality jakosti – modul QMS.

Plánovat a řídit výrobu lze i pomocí **speciálních aplikací** vyvinutých podle požadavků zákazníků (miniaplikace). Výroba je úzce spojena s dalšími moduly, jako jsou Sklady, Plánování nakládky, Technická příprava výroby, Logistika, Evidence výroby, Docházka, Údržba a diagnostika strojů, Správa nářadí a přípravků.

Plánování výroby v systému myGEM

10_18

- myGEM offers **intuitive** mouse **control** and full keyboard controls
- for simple work in windows the **desktop workspace** is ready
- IS allows you to **log in only once**, namely with direct access to **all modules** for which the user has rights
- **user-configurable appearance** and access to functions
- using the **Add function button** can easily add selected and **frequently used functions** directly into the window after starting

WORKSPACE

N			50254	50254	GEOIMINE, A.S.
N			52324	52324	GES-ELECTRONICS, a.s.

- Implementation typically consists of several steps and a specific timetable is drawn up for a particular project.

- **Typical steps and milestones of implementing ERP solutions:**

- **Diagnostics** (local surveys, data samples, real document patterns, ideological suggestions of requirements)
 - Understand well the company environment and identification of areas requiring improvement:
 - assembling a customer team
 - Team Leader and responsible solvers for each area
 - detailed gathering of information about processes, practices, press releases, specific requirements, other systems required for integration

HOW TO IMPLEMENT

- **Solution proposal** (workshops, discussions with key users and the whole team)
 - Developing of defined requirements as assignments for consultants and programmers according to customer requirements and expectations.
 - parameterization
 - special adjustments (integration, new features, adjustments, ...)
 - database conversions

Determining the conditions for changes mainly in the main process (standard, quick change, ...).

- **Preparation of the software solution** (analytical, programming and control work)
 - Include specific requirements in the software:
 - finishing the special requirements according to the proposal of the solution
 - testing and checking
 - analysis of the database

■ **Implementation and training** (detailed implementation plan, training)

- Ensure mastering the tool for the main process, including specific requirements:
 - experienced consultants will explain the complex system by individual parts and the course of the entire order
 - training of management, administrator, users ... effectively leads to understanding and mastering the tool for managing the main process and economic modules
 - together with you set up and control the level of the database
 - trial operation of the entire system
 - releasing the system into routine operation

■ **Operation and maintenance**

- Ensure the stable operation and system development :
 - determining the way of participation of the supplier due to the client's requirements
- Ensuring the stable operation – helpdesk:
 - hot-line
 - mode 7x24, or other
 - system development (update, upgrade)

Client support in dealing with marginal situations. Compliance with the legislation of the state (country) where the information system is operated.

Monitor client needs and processes changes so that software tool (parameterization, ...) improves processes efficiency.

EXAMPLES OF SPECIAL ADJUSTMENTS

- Product Configurator – rapid creation of virtual product according to the specific customer needs
- Loading and packaging solutions
- COC sheets (Certificate Of Conformity)
- Vehicle registration certificate – automated creation from myGEM data, online export to a central database
- Dispensing dose and mobile terminals, barcodes and QR codes
- Distribution of documentation to the machine
- Type technological procedures – parameterized for different types of production
- Exceptions – a tool for configuration management in production
- Collecting data from production equipment
- Links to web – selling products, spare parts
- Applications for mobile phones – the company status, tasks monitoring, sales
- Bulk functions – combining multiple functions to optimize a process (one „click!“)
- Integration with external programs – ENOVIA PLM, SolidWorks, ...
- Special methods of production planning
- ...

The image displays three screenshots of the GEMCO software interface. The top screenshot shows a 'PLÁNOVÁNÍ NÁKLADŮ, BALÍČNÍ A NÁKLADNÍ SAMOTNÁ' (Production Planning, Batch and Single Load) window with a table of parameters. The middle screenshot shows a 'LOG - Míst - Přehled nakládání' (Log - Location - Overview of loading) window with a table of loading data. The bottom screenshot shows a 'PLÁNOVÁNÍ NÁKLADŮ LST II, DODÁNÍ' (Production Planning LST II, Delivery) window with a table of delivery data. The interface includes various tabs, buttons, and data tables, all in a professional, functional design.

- Above the myGEM system it is possible to operate **online Web applications** that communicate via the service online with the database server. We also provide development of these applications.
- Applications are standardly ported to mobile devices (Android, iOS).

MINI APPLICATIONS

- We are able to prepare so-called „**mini applications**“ for special process requirements. These applications are specially compiled modules for specific customer.

The image displays two overlapping screenshots of a software application titled "Evidence ML". The background window shows a data entry form with the following fields and values:

- Pracovník: 740 Hrubec Tomáš
- Zakázka: 16F00249
- 119363 Foot Black
- Víceotisk. forma: ☐
- Operace: 010 L 07 Směna: 1.
- Čit. zač.: 31 842 Počet. kon.: 0
- n. celkem: 13 158 KS
- n. shod.: 13158 KS Mn.nesh: 0 KS
- r. dávka:

At the bottom of the background window, there are two buttons: "ukončení evidence" and "původní stav", and a field "Doba práce: 0 min".

The foreground window is a smaller version of the same form, also featuring a numeric keypad. It contains the following fields and values:

- Pracovník: (empty)
- VIN: (empty)
- Operace: (empty)

- Quality management modules
- Paperless production
- Automated warehouse Kardex Remstar
- Sprinter
- Online process analysis
- Manufacturing Execution System MES
- Accountancy
- EET
- EDI
- PKM

QUALITY MANAGEMENT MODULES

- The system works **online** with standard myGEM data and is supplemented by robust modules of selected Core Tools.
- Includes:
 - FMEA process/product
 - Control plans
 - Module for measuring process values and SPC evaluation (P_{PK} , C_{PK} ...)
 - Nonconformance management and 8D report, Complaints procedure
 - Project and task management
 - KPI (Key Performance Indicators)
 - Layered process audits LPA
 - ...
- The necessary data is stored only **in one place**, special modules use it appropriately.
- To support quality, it is integrated into standard modules, e.g.
 - Comprehensive change service - over design and production data
 - Detailed traceability to products and their variants and designs
 - Demonstration of Flow process
 - Process analysis in terms of added value and losses
 - Project and task management
 - ...

QUALITY MANAGEMENT MODULES

■ Benefits:

- **The necessary evidence** from the process is **quickly available** for a specific project, order or product
- Easy orientation and fast data availability
- Seamless data validity, data is true and error-free
- Labor savings, **data is created** directly in the process **only once**
- Prepared **reports for proving**

- This is the effective use of mobile devices such as tablets in production and the sharp reduction in paper documentation. Documents and myGEM functions for each **role** are available on the device, for example: **production manager, foreman, labourer, inspector, warehouse worker, expedition worker**, simple applications are built up according to the role.
- The big advantage is that valid **documents** are **available online** and important **records**, such as release of the operation, release of the exit control, start or end of work, are **recorded on-line**.
- Using this principle leads to **time savings** and better **adaptation to changes**. Applications are developed in the easiest way for users, to make them virtually instantly used.
- Progressive approaches are used for solution, such as QR codes, special signing devices, all of these help to minimize paper documentation.

Safe = Product documentation in one place

- In common practice happens that documents are created in more systems. It can be mentioned as an example PLM for the graphic editors CATIA, SolidWORKS. To make production work with the right data, we have developed simple **communication between the various external editors and the TPV module**. Each component has assigned, apart from the BOM (Bill Of Materials) or the technological procedure, also other **important documents and data**. As an example, we include CAD, NC data, assembly instructions, inspection, measurement protocols, proof of functional test.
- The product „goes“ through the entire process of implementation and always has the current data available according to which production takes place. This principle makes it possible to produce highly personalized products at a low price.
- All product documentation is in electronic form and is available anywhere and is fully changed (valid status, history, content changes).

PAPERLESS PRODUCTION

- **Issue for the order/Evidence of Time card**
 - **Realized issues** in any way will be automatically displayed as standard in the **Warehouse – Issue slips**.

- **Issue of expedition – example**
 - Taking the barcode of the dispensing batch on the expedition or picking from the list of prepared batches we prepare the expedition of orders by individual recipients.

- The **myGEM** information system is **connected online** to the **Kardex Remstar** automated storage system.
- It is a top innovation in storage area, warehouses optimization, processes of preparing for dispatch, cost cutting and high labour productivity.

• Source of images: www.kardex.com/cs

SPRINTER

- **SPRINTER** allows you to **analyse** online data from your processes and **dramatically improve productivity**.
- Examples of savings:
 - **30% reduction** in delivery time
 - **100% control** of inventory
 - a substantial **increase in the use of workers**

- „What is **really important** is usually not seen at first glance; it remains hidden.“
Sometimes this approach is called the „**Iceberg theory**“.
- To look „beneath the surface“ and **uncovered a range of problems**, we need information about the „real“ behaviour of the processes.
Results of analyses of specific cases are **surprising!**

SPRINTER

- That which threatens our timing it is usually very simple. There is a lack of materials for production, for example.
 - Do we really have these activities under control?
 - Why not order and deliver materials on time, who and what is holding-up the whole process?
- For these and many other questions we have prepared a **series of on-line tools and views** that quickly provide data to significantly improve productivity in your organization.

- Example of a specific order analysis and resources consumption survey.

- Finding time losses during the fulfilling the order

MANUFACTURING EXECUTION SYSTEM MES

- The in-depth modules of the information system serve as the basis for the compilation of executive process control and especially production. These are mainly **TPV modules, production management and planning, maintenance, process monitoring, change service, distribution of machine documentation**. In these cases, we often address specific customer requirements, which are processed in the form of, for example, **special functions or mini applications**.
- The customer has fully covered all important requirements and **complex processes are handled by a specially developed tool**. This creates a „simple“ tool for relatively complex processes. Part of the solution is the online reading of values, e.g. from assembly machines, lines, injection molding machines (NOK, OK, cycle times,...).
- Examples of MES are applications in the following areas:
 - Production of final products with configurator – consumer goods
 - Engineering
 - Prototype production for the automotive industry
 - Serial tools
 - Plastic production
 - Production of plastics, including assembly of subassemblies
 - Production for the army

ACCOUNTING

- Standard features for management accounting agenda. Parametric construction enables its use in any types of organizations of various sizes and activities:
 - **Invoicing**
 - **Treasury**
 - **Financial planning**
 - comparing the plan and reality monthly, cumulatively, ...
 - **Property**
 - automatic control of set points, accounting in multiple currencies
 - **Banking operations**
 - **Intrastat**
 - electronic output for IDES, printouts of receipts and dispatches
 - **Financial analysis**
 - **Planning and controlling**
- It is developed and tested with accountancy experts and regularly audited independently.

EXAMPLE

myGEM

- Billing the commitment with disintegration into controlling.

Podpisem příjemce, že zboží bude převezeno do svého domácnosti EU.

Razítko a podpis zákazníka

- **EDI = Electronic exchange** of structured standard messages between two applications of two independent entities, the messages have the same form and „speak“ the same „language“
 - **EDI application** creates a document, automatically processes, receives and sends (invoices, certificates, stocks, orders, ...)
 - The system supports the so-called “In-house” objects according to international standards
 - Fully **replaces paper documents**

PKM

- **PKM** = Programmable communication module used for **bidirectional communication with external programs**, for specialized integration can be used standard means such as XML, CbC, etc.

KEY METHODS – EXAMPLES

- Powerful analytical and reporting tools that allow you to **use the data** not only for the analysis of events that have already occurred, but also **predictions of the future development of the company**.
- **Provides monitoring** e.g.:
 - sales turnover
 - purchase turnover
 - stock value
 - production
 - economic centres
 - financial flows, ...
- For executive managers.

It is a demonstration of „**our view**“ on detail solution which we see in the processes, because

- **realisation process** (from sale to delivery) in each company is **somehow specific**;
- there are different ways to manage simple manufacture, manufacture of subassemblies (pre-assembled units), finished products or providing cooperation;
- in the following text we will show you some **basic modules**, to understand our view on the examples.

CRM

We are dealing
with a potential
customer

We are checking
options

We have won, we
start fulfillment

We order
material

We produce

We deliver

We evaluate

- Support of **marketing** activities, it is the basic tool for managing customer relationship.
- Monitoring of own and competing products.
 - Initial **evidence of potential partners**
 - **Interconnection** of systems, it follows that all data of a specific customer are monitored from project to task management, production technology, cost management, and evaluation
 - Tracking partner **status**
 - Success **evaluation**
 - Monitoring the development of market **segments**
 - Monitoring the development of individual client **projects**
 - **Campaign** management
 - Fast **quote creation**
 - Diary – **reminders**
 - **A comprehensive overview in one application**

We are dealing
with a potential
customer

- We have won, we issued the order from the customer.
- **Managing** and monitoring of **sales activities** (contracts, invoices, business case evaluation), including **business analysis**.
 - **Creation of quotes and orders**
 - Evidence of **cancellation** (including EDI)
 - Supplies **overview**
 - **Generate orders in one step**
 - **Solution overviews**, internal orders
 - **Reservation upon order**
 - **Price levels**
 - Evidence of **complaints and service contracts (R/S)**
 - Analysis of the **causes and culprits of defects**
 - **Real status** solution
 - **Claims evaluation**
 - **Traceability**

LOGISTICS SALE

We are dealing
with a potential
customer

We are checking
options

We have won, we
start fulfillment

We order
material

We produce

We deliver

We evaluate

- Sometimes sales is **planning the assembly, business plan** – sales submodul which, based on the entered estimated capacity, **automatically generates dates for assembly and delivery.**
- Planning method also takes account of time savings.

- Entry Business Plan = basis for the Production Plan

- Graphical display of performance **Entry Business Plan** (according to the time and amount)

EXAMPLES OF ANALYSIS

myGEM

We are dealing
with a potential
customer

We are checking
options

We have won, we

We order
material

We produce

We deliver

We evaluate

- There are important additional information for our decisions.

- Supplies overview

- Analysis of orders

PROJECTS AND TASKS MANAGEMENT

- **Project management and task** = records, **tracking performance** and the current status of assignments, including their assessment. Project management and tasks provides, among others, the following functions:
 - Interconnection projects, including CRM division into phases – **Schedules (Plans)**
 - **Assignment of tasks** by the responsible solvers
 - **Watching „capacity“** in the planning calendar
 - **Methodology** for **tasks assessment** (term consumption of time, extra work ...)
 - **Colour-coded status** and performance of the whole stage schedule (selected by the user)
 - **The percentage fulfillment** of individual tasks and the whole stage schedule
 - **Action Plan** – in the form of „dynamic“ solutions to the given problem
 - **Creating a plan for a specific period and workers**

We are dealing
with a potential
customer

We are checking
options

We have won, we
start fulfillment

We order

Informační systém myGEM www.gemco.cz

- The module **monitors the material** from the formation of the requirement to implement specific production orders = **important process** for every business.
- Using **barcodes** for receiving and dispensing the stock, including the **monitoring of storage places**.
- **Claims management of purchased** items with **relation to claims from customers**.
- **Automatic creation of orders** according to **current production requirements**.

PURCHASE, WAREHOUSES

- Managing data on **purchased** items (batch, storage space, inspections, ...)
- Monitoring of material invoices and cost
- **Monitoring** and **evaluation of the quality** of supplies and suppliers
- **Monitoring** inventory and manufacturing requirements
- **Income and output** from the store using mobile terminals
- **Planned expenditures**
- **Analysis** of stock movements
- **Simulating the impact** of changes in the production plan to supply
- **Claims management** of purchased items
- **Integration of suppliers – WEB portal** for their management
- Possibilities of **stock consignment**

EXAMPLE OF DRAFT ORDERS

myGEM

- Purchase features – **automatic draft order** (material, cooperation) is used to ensure "continuity" of production and optimum stock availability.

Stav materiálu - objednávky (18.08.2011 - 20.09.2012) - akt. týden: 201138 - přepočít: 31.05.2011 10:42

- Module for managing mobile terminals is “**native**” applications **myGEM** and works in **on-line** mode module **Warehouses**.
 - **Income and outflow** of purchased items via **mobile terminals**
 - **Quick outflow** of items from the warehouse terminal using the so-called **outflow batch**
 - **Automatic transfer**, including generating the necessary documents, without manual user creation (transfers, requisitions, delivery notes, ...)
 - Carrying out **incoming** and **final inspections** on products
 - Outflow of items from the warehouse for each contract, for stacker, shipping/loading
 - Ability to perform an **inventory** of warehouses by mobile terminal
 - Change of storage location

• Mobile terminals: Motorola TC26BK, Keyence BT-A700

AN EXAMPLE OF USING BARCODES AND QR CODES

We are dealing
with a potential
customer

We are checking
options

We have won, we
start fulfillment

We order
material

We produce

We deliver

We evaluate

- Efficient mobile devices are used for receiving, storing, issuing material and inventory. For these devices we have prepared special software modules.

- Printing labels from the product labelling app

- Example of a storage label

GEMCO Uherské Hradiště		VÝDEJOVÁ DÁVKA: 00000007	Strana: 1 / 1
			Datum: 9.7.2008
			Sestava: r_vyd_davka
Plán. datum výdeje: 02.07.2008			
Položka	Název	Množství	MJ
B/2, B/3	Zdroj 220/9V 1A	8 ks	
E0003	Zástrčka	7 ks	
E0006	Tranzistor N-MOS 100V/18A/52mV	42 ks	
E0007	Dioda stabilizační	60 ks	

- Example outflow batch for picking items from the warehouse using a mobile terminal

- The module is used **to time, quantitative, capacity planning** by type of production.
 - Taking over from the sale, including **automatic generation of documents and barcode labels in one step**
 - Assessment of the **capacitive loads** of individual workplaces and their solutions
 - Evaluation of **summary material requirements** in individual planning periods
 - **Making views, executive plan** (plant, center, workshop) and fault solution
 - **Identifying differences** between the requirements of trade and production (overruns solution ...)
 - Modification of the plan of orders according to the agreed loading (application of the **KANBAN** principle)

MANAGEMENT AND PRODUCTION PLANNING

- Production planning and control of **piece** (custom), **serial** and **mass**
- Use of **transport batches**
- Scheduling, both **progressive** and **regressive**
 - According to throughput times, processing times, ...
 - Depending on the type of capacity, machine, ...
- **Production design / planning of finished** (FVV) and **semi-finished** (PVV) goods based on the requirements of production and sales and the current warehouse state
- Application of the **Synchro MRP** principle (production part planning, semi-finished, assembly according to orders)
- We provide **accommodative** planning for each process

We are dealing
with a potential
customer

We are checking
options

We have won, we
start fulfillment

We order
material

We produce

We deliver

We evaluate

- Production can be planned in many ways but each production is specific.

- Used for the production of:
 - mass
 - piece
 - finished products
 - semi-finished products
 - spare parts

PLANNING EXAMPLES

We are dealing with a potential customer

We are checking options

We have won, we start fulfillment

We order material

We produce

We deliver

We evaluate

- Specific outputs are customized to customers.

- An example of using barcodes in production: time card, production card

- The module is used primarily for **financial and quantitative evaluation** of the status of work in progress, the **evaluation of planned and actual costs**, fulfilment of performance standards, preparation of documents for wages and **quality monitoring**.
 - Material requisitions (limit sheets), including the dispensing of a bar code
 - Job tickets (work container)
 - Time card **clock-out** via barcode
 - Records during production
 - Conscription of semi-finished products, finished products from production
 - Records of **final inspection** via terminals
 - **Records of non-conformities**, returns, downtime and other work
 - Monthly **closing** in production
 - **Traceability** (batches, serial numbers, ...)

We order
material

We produce

We deliver

We evaluate

- Key values that predict the quality of the process and products are captured and displayed from machines.
- Values are also captured from special single-purpose machines that are part of the automation of the manufacturing process. Standards that use protocol ProfiNET are primarily used here.

- Online data acquisition from the machine

LINE-SIDE DOCUMENTATION DISPLAY EXAMPLE

myGEM

- **Machine maintenance** is a simple tool for monitoring the status of **production and maintenance** of machines. The aim is to ensure **maximum equipment life** with higher **safety** and **reduce costs**.

It provides:

- **Maintenance scheduling**
- **Predictive maintenance plan**
- Monitoring and registrations of completed **repairs** (internal/external)
- Machine **diagnostics**
- Data **imports**
- **Control diagrams, ...**

MES PRODUCTION PARAMETERS

We are dealing
with a potential
customer

We are checking
options

We have won, we
start fulfillment

We order
material

We produce

We deliver

We evaluate

- We monitor a number of parameters, among standards belong:
 - **OEE – Overall Equipment Efficiency**
 - **MTBF – Mean Time Between Failure**
 - **MTTR – Mean Time To Repair**
 - **Utilisation** of machinery and equipment in %
 - **Performance** of machinery and equipment in %
 - **Production quality** in %

- For production planning and the security of deliveries in time, it is necessary to ensure reliable operation of all equipment.
- Visualisation and overviews about machines are the basis of predictive maintenance.

ECONOMIC EVALUATION OF THE CONTRACT

We are dealing
with a potential
customer

We are checking
options

We have won, we
start fulfillment

We order
material

We produce

We deliver

We evaluate

- The order is evaluated after realization, more detailed evaluation is solved in the Planning and Controlling module.
- Evaluation can be done from many perspectives and dimensions. These tasks are always tailored to specific requirements.

- Most companies have a credit at the banks, which usually require reports of key indicators.
- We provide the following indicators as a standard:
 - **Current liquidity**
 - **Return on sales**
 - **Short-term liquidity**
 - **Long-term debt**
 - **Total debt**
 - **Inventory turnover from sales**
 - **Maturity of payables/receivables**
 - **Expenses**
 - **Average daily sales**
- Option for reporting on other indicators according to **user definition**.

STAV FIRMY

We are dealing
with a potential
customer

We are checking
options

We have won, we
start fulfillment

We order
material

We produce

We deliver

We evaluate

- **Quick overview of the current status of the company**, designed especially for leadership. The option of viewing on devices such as tablets, mobile phones, etc.
- It offers:
 - **General overview – status:**
 - cash
 - cashless accounts
 - assets and liabilities, including maturity
 - profit
 - VAT
 - inventory
 - **Economics – status:**
 - selected accounts
 - financial flows
 - costs and revenues
 - economic results

- **Logistics** displays a detailed overview of:
 - the status of individual stocks,
 - top 10 (customers/suppliers),
 - real-time expedition.
- **Production** provides an overview of **current contracts** and their **state of development in %**.

SOME BENEFITS

Current overview
of processes and
business parameters that
are important for
management (sales
analysis, supply
discipline, workplace
efficiency ...)

**Extensive use of
barcodes and mobile
technologies**
online receipt, dispatch,
moving materials,
products, transaction
logs, expeditions ...

**Fast mastering of
software solution =
security of investment**

**Integration of web
applications and
partners**
(EDI, web portal solutions
for communication with
suppliers, customers ...)

**The tool for managing
all realisation
processes**
from offer /demand,
contract, TPV, purchase,
detailed planning,
production records to
expedition

**Cost savings and higher
performance!**
Optimizing the staff in
selected areas, integrating
suppliers, improving
warehouse management,
expeditions ... and
significantly boosting
company performance with a
suitable software application!

**Quality data, the
starting point for
improvement!**
process data provide
valuable information for their
further development; e.g.
workplace efficiency and
analysis
of waste resources
(downtime, manipulation ...)

**... and many other
solutions!**

AGADOS, spol. s r.o.

- **The entire realisation process** from trade, development to delivery is **fully covered** by the information system.
- **Fulfillment of individual requirements** with **product configurator**.
- **Increase of production by 100%** with minimal increase in technical and workers' personnel.
- Fast communication with the client – **interconnection myGEM to the web** – for new products and spare parts.
- **Saving workers** when processing COC sheets, vehicle registration certificates and communication on central records.
- Gradual **shortening of deliveries**.
- And many others ...

and many other companies ...

- Examples of **myGEM product security** solutions:
 - compatibility with the latest valid version of operating systems (MS Windows, Windows Server, Oracle Linux) and new versions of databases
 - implementation of TLS 1.3 security protocol for safer communication and higher performance with web services for communication with external entities
 - implementation of OAuth 2.0 authentication, multi-factor login
 - direct SOAP and REST API support for communication with modern web services
 - support for generating 64-bit applications
 - new tools for CI/CD (acceleration of software delivery time)
 - use of new, more secure encryption algorithms
 - support for the security of multi-layer applications using the latest valid versions of .NET CORE
 - increasing the security of one's own database against attacks by attackers – e.g. monitoring possible attacks
 - and many other tools and rules...

MYGEM LEARN

- **The supplier provides training throughout the use of myGEM.**
- Training takes place according to regularly posted dates or at the user's request.
- The training is designed to develop the knowledge of existing and new myGEM users.
- The trainings are divided into several levels:
 - **beginner**
 - **self-employed clerk**
 - **specialist**
 - **trainer**
- The effectiveness of the training is supported by the fact that the training takes place on specific model data, which allows to present and understand exactly the meanings, contexts and importance for the smooth running of the whole process.
- The trainee will receive suitable materials in the form of presentations, instructions for specific functions (if needed) and a certificate of competence achieved.
- The supplier also keeps track of **the list of trained workers and their achieved competencies for a specific client.**
- The mentioned procedure helps a lot in the **development and sustainability of the myGEM system.**

- The quality of our work is regularly audited by independent certification companies.

WE ARE LOOKING FORWARD TO COLLABORATE WITH YOU!

- We successfully increase efficiency!
